Master Assurance Report — Public Sample

Frozen derivative of a genuine persisted HAIEC evaluation · rendered verbatim from export digest
sha256:426985da32af4101ffa669c1c5751eeb99083b7fbb701a1cc53bd7e055b4b88f

SYNTHETIC LAB DATA | EVIDENCE-ONLY BASIS

FROZEN EXPORT · NOT A NEW EVALUATION

What this report is — and is not

Evaluated by HAIEC's deterministic assurance engine

This report is bound to a persisted evaluation, its evidence digests and control-test receipts. It is an evidence-only assessment — not a source-code scan, a live factory-monitoring session, or proof of a production-plant event. The underlying manufacturing corpus is synthetic lab data; the evaluation results are genuine deterministic HAIEC output, frozen and re-verified by SHA-256 export digest.

A witnessed effect is not an authorized effect

Rule MFG-EFF-001 reports MATCH because its predicate observed an effect — a transaction independently read back on the wrong work-order target. MATCH means the divergence predicate was satisfied; it is a consequential divergence finding, not a pass, and it is not evidence that the action was authorized, safe, or target-correct.

SHA-256 digests are integrity checks recomputed over this frozen export. They are not cryptographic issuer signatures and do not authenticate who published the export.

Deterministic rule outcomes

RULE	OUTCOME	RULE REASON (VERBATIM)	QUALIFIED CLAIMS	MISSING C
MFG-AUTH-001	NO_MATCH_WITH_ADEQUATE_COVERAGE	all qualified callable operations are inside the approved delegated scope — read-only or undeclared-reachability paths do not match	APPROVED_POLICY, EFFECTIVE_GRANT, NATIVE_TARGET_READBACK, OBSERVED_DISPATCH, PINNED_STATIC_CAPABILITY	–
MFG-EFF-001	MATCH	transaction syn-txn-b855a022ebe42786bf committed and independently read back on "WO-217-4803" while the approved target was "WO-217-4802" — qualified target divergence, not a root-cause claim	APPROVED_POLICY, EFFECTIVE_GRANT, NATIVE_TARGET_READBACK, OBSERVED_DISPATCH, PINNED_STATIC_CAPABILITY	–
MFG-EFF-002	INSUFFICIENT_SOURCE	MFG-EFF-002 not evaluated — required claim coverage absent or unqualified: COLLECTOR_CONTINUITY	APPROVED_POLICY, EFFECTIVE_GRANT, NATIVE_TARGET_READBACK, OBSERVED_DISPATCH, PINNED_STATIC_CAPABILITY	COLLECTOR
MFG-QMS-001	NO_MATCH_WITH_ADEQUATE_COVERAGE	every committed release-class operation is covered by an actor inside the effective approved roster and scope	APPROVED_POLICY, EFFECTIVE_GRANT, NATIVE_TARGET_READBACK, OBSERVED_DISPATCH, PINNED_STATIC_CAPABILITY	–

RULE	OUTCOME	RULE REASON (VERBATIM)	QUALIFIED CLAIMS	MISSING C
MFG-OBS-001	INSUFFICIENT_SOURCE	MFG-OBS-001 not evaluated — required claim coverage absent or unqualified: COLLECTOR_CONTINUITY	APPROVED_POLICY, EFFECTIVE_GRANT, NATIVE_TARGET_READBACK, OBSERVED_DISPATCH, PINNED_STATIC_CAPABILITY	COLLECTOR

RULE_OUTCOME != ASSURANCE_VERDICT. A MATCH marks that a rule predicate was satisfied against qualified claims — read the verbatim reason for what was actually established.

Manufacturing control maturity — UCP control results

CONTROL	FACETS	UCP RESULT / RECEIPT	EXECUTED RULES
R01 Action lifecycle and side-effect traceability	CATALOG_REFERENCE **YES** IMPLEMENTED_VISIBILITY **NO** QUALIFIED_SOURCE_READY **YES** EXECUTED_RULE **YES** GOVERNED_UCP_WITH_RECEIPT **YES** INDEPENDENT_EFFECT_EVIDENCE **YES**	SATISFIED RECEIPT_BOUND	MFG-EFF-001

Reading R01 SATISFIED correctly

SATISFIED is an effect-witness / control-evaluation result: the control's executed rule observed the consequential effect and a UCP receipt is bound to this evaluation. It does not certify the action was authorized or safe — here it witnesses the wrong-target effect itself.

Facet version manufacturing-report-facet/1.0 · qualified observations: 5 · rejected: 0

Assurance question states

REACH NOT_ASSESSED

HAIEC has not assessed what this system can reach in this evaluation.

AUTHORITY NOT_ASSESSED

Authority was not assessed for this evaluation.

OBSERVED NOT_ASSESSED

HAIEC has not established that observed actions occurred in this evaluation — missing runtime evidence is not proof that nothing happened.

PROOFBOUNDARY PARTIAL

The proof stops at 5 unresolved evidence-frontier item(s) and 1 open evidence need(s) — listed verbatim.

Declared limitations

- EVALUATION_EVIDENCE_UNBOUND_OR_FOREIGN_EXCLUDED:5
- NO_RAW_TELEMETRY_CARRIED
- PROFILE_VIEWS_MUST_NOT_ALTER_TRUTH_FIELDS
- PROJECTION_NOT_ANALYSIS
- SINGLE_STATE_EVALUATION — one declared state; no transitions to project

Control-maturity limitations

- WITNESS_FACET: rows are evidence projections — no aggregate score exists and none may be derived
- QUALIFIED_SOURCES_ONLY: only binder-qualified, evaluation-bound claims feed the facets
- RECEIPT_FROM_STORE_ONLY: GOVERNED_UCP_WITH_RECEIPT requires a persisted uctr row whose consumed observations all come from this evaluation bound batches and whose spec digest reproduces the currently governing digest
- EVALUATION_BOUND_BATCHES: claims outside the attached batch set are not part of this evaluation, even for the same system

Product semantics

- EVIDENCE_ONLY != SCAN_BACKED — no static scan is bound to this evaluation; code reachability and source coverage are NOT_ASSESSED, and scan-derived artifacts (Passport, operation coverage) are honestly unavailable.
- INVESTIGATION != EVALUATION — the linked investigation may contain evidence received after this Evaluation; this report remains bound to the frozen Evaluation snapshot.
- MASTER_REPORT != DECISION_RECEIPT — the receipt is a separate U6 package artifact.
- SCENARIO_STATE != ASSURANCE_DISPOSITION — declared scenario levels (including AL0/AL1/AL2) are event labels, never Assurance verdicts.
- EARLIEST_ESTABLISHED_DIVERGENCE != ROOT_CAUSE.

Original authenticated report

The canonical Master Report — HTML, PDF and detail views — is hosted by HAIEC and requires a signed-in member of the evaluation-owning organization. Unauthorized visitors receive HAIEC's normal fail-closed response.
