BEYOND MODEL SCORES AND SECURITY CHECKLISTS

AI CAN PASS THE CHECKS.
THE ACTION CAN STILL BE WRONG.

As AI shifts from answering questions to making operational decisions, the missing proof is not just model quality. It is whether a specific consequence was authorized and supported by evidence.

A SIMPLE MANUFACTURING EXAMPLE

The AI was asked to update one work order. The API returned success. A different work order was changed.

APPROVED ACTION	API RESPONSE	EVIDENCED RESULT
WO-217-4802	200 OK	WO-217-4803

An API success code does not establish business correctness.

CONVENTIONAL CHECKS CAN MISS THE CONSEQUENTIAL CHOICE

SECURITY SCAN	Code passed its inspection	**Was the exact target authorized?**
ACCESS CONTROL	The credential had access	**Was the choice delegated?**
MODEL EVALUATION	The model performed well	**Did the intended effect occur?**

NOT AI TESTING AI.

HAIEC applies deterministic, versioned rules to qualified evidence. AI can explain a result but cannot replace the official assurance evaluation.

THE CENTRAL QUESTION

What can this AI actually cause, and who authorized it?

HOW HAIEC MAKES CONSEQUENCES INSPECTABLE

FIVE DISTINCT QUESTIONS.
ONE EVIDENCE-BOUND DECISION.

HAIEC keeps evidence separate so a permission, policy, code path, and observed effect cannot be mistaken for each other.

01	02	03	04	05
REQUESTED	**AUTHORIZED**	**GRANTED**	**CAPABLE**	**OBSERVED**
What was asked?	What policy permits?	What access exists?	What code can reach?	What evidence shows?

DETERMINISTIC RULES + QUALIFIED EVIDENCE + EXPLICIT UNKNOWNS

Missing evidence remains visible. A supported finding does not automatically make other unassessed questions safe.

VALUE BEYOND THE HACKATHON

ENGINEERING

Expose consequential paths and authority gaps.

OPERATIONS

Clarify the boundary between advice and authorized action.

AUDIT & RISK

Retain traceable findings and explicit proof limits.

WHAT HACKFW JUDGES CAN EXAMINE

Station 217 wrong-target evidence, 45 saved evaluations from nine synthetic systems, rule-level outcomes and a separate local simulation of MES, ERP and equipment decisions.

JUDGE DEMO

Guided showcase and saved evidence

SOURCE + GUIDE

Repository, case data and proof boundaries

Demo scope: synthetic manufacturing evidence and browser-local simulations, not a live plant.
